✓ **What will print(2 \*\* 3) output?**                    1/1

○ a) 6

◉ b) 8                                                        ✓

○ c) 9

○ d) 4

✓                                                            1/1

**Which Python keyword is used to create a loop that iterates while a condition is true?**

○ a) for

○ b) loop

◉ c) while                                                   ✓

○ d) iterate

?

✓ **What is the correct way to declare a tuple in Python?**    1/1

○ a) [1, 2, 3]

○ b) {1, 2, 3}

◉ c) (1, 2, 3)                            ✓

○ d) tuple[1, 2, 3]

---

✓ **What will be the output of print(type(5)) in Python? ***     1/1

○ a) <class 'str'>

◉ b) <class 'int'>                       ✓

○ c) <class 'float'>

○ d) <class 'boolean'>

---

✗ **What is the result of print("Hello" + 3)?**    0/1

◉ a) Hello3                          ✗

○ b) Error

○ c) 3Hello

○ d) Hello Hello Hello

Correct answer

◉ b) Error

✓ **How do you start a multiline comment in Python?**                    1/1

○ a) //

○ b) /*

◉ c) """                                                                    ✓

○ d) #

✓ **What will list("hello") return?**                                    1/1

○ a) ['hello']

◉ b) ['h', 'e', 'l', 'l', 'o']                                              ✓

○ c) (h, e, l, l, o)

○ d) None of the above

✓ **How do you check the data type of a variable x in Python?**          1/1

◉ a) type(x)                                                                ✓

○ b) checkType(x)

○ c) typeof(x)

○ d) getType(x)

✓ **Which function is used to get user input in Python?**                    1/1

○ a) read()

◉ b) input()                                                              ✓

○ c) get()

○ d) fetch()

✓ **What will bool("False") return?**                    1/1

◉ a) True                                                                ✓

○ b) False

○ c) None

○ d) Error

✕ **What does ord('A') return?**                    0/1

◉ a) 65                                                                  ✕

○ b) 'A'

○ c) ASCII value of 'A'

○ d) Both a and c

Correct answer

◉ d) Both a and c

?

✓ **What will print(5 / 2) return?**                                        1/1

○ a) 2

◉ b) 2.5                                                                     ✓

○ c) 2.0

○ d) Error

---

✓ **Which function is used to find the length of a string in Python?**      1/1

○ a) length()

○ b) size()

◉ c) len()                                                                  ✓

○ d) count()

---

✓ **What is the output of print(3 == 3.0)?**                                1/1

◉ a) True                                                                   ✓

○ b) False

○ c) Error

○ d) None

✓  **What will print(10 // 3) output?**                                    1/1

○  a) 3.33

◉  b) 3                                                                        ✓

○  c) 4

○  d) 3.0

○  Option 5
